

Will Perry

Microsoft 365 & Modern Workplace Engineer

Cheltenham, Gloucestershire, UK
will@peztech.org | 07508 349461 | peztech.org

Microsoft Intune | Windows 11 | Windows Autopilot | Entra ID | Microsoft 365 | PowerShell | Microsoft Graph

PROFESSIONAL PROFILE

Microsoft-focused IT engineer with 15+ years of experience across internal IT, MSP and customer environments, specialising in Microsoft Intune, endpoint management, Microsoft 365 and Entra ID.

Currently responsible for IT operations and technical project delivery across a multi-site, 200-user organisation, with hands-on experience designing, implementing, managing and improving Intune solutions across Windows 10/11 and mobile endpoints. Experience includes Windows Autopilot, device enrolment, configuration profiles, compliance policies, application deployment, endpoint security, Entra ID and Conditional Access.

Experienced using PowerShell and Microsoft Graph API for Microsoft 365 administration, automation, reporting, technical investigation and third-party integrations, alongside troubleshooting complex issues across Microsoft 365, endpoint, identity and application services.

Strong background delivering technical change and platform improvements from investigation and design through implementation, testing, documentation and operational handover.

CORE SKILLS

Endpoint & Modern Workplace

Microsoft Intune, Windows 10/11 endpoint management, Windows Autopilot, device enrolment, configuration profiles, compliance policies, application deployment, endpoint security, Apple Business Manager and mobile device management.

Microsoft 365

Microsoft 365 administration, Exchange Online, Microsoft Teams, SharePoint Online and OneDrive.

Identity & Access

Microsoft Entra ID, Conditional Access, MFA, Enterprise Applications, SSO, SCIM provisioning, Active Directory and Microsoft Entra Connect.

Automation & Integration

PowerShell and Microsoft Graph API for Microsoft 365 administration, automation, reporting, technical investigation and third-party integrations.

Security

Microsoft Defender, endpoint protection, Microsoft 365 security controls, identity security, email security and security policy implementation.

Engineering & Delivery

Complex troubleshooting, root-cause analysis, technical project delivery, platform improvements, technical documentation, operational procedures, ITSM/service improvement, supplier management and stakeholder engagement.

PROFESSIONAL EXPERIENCE

Senior IT Support Engineer

Traffic Group Signals | April 2020 - Present

Responsible for IT operations and technical project delivery across a multi-site, approximately 200-user organisation, with particular ownership across Microsoft Intune, endpoint management, Microsoft 365, identity and security.

- Manage Microsoft Intune across Windows 10/11 and mobile endpoints, including device enrolment, configuration profiles, compliance policies, application deployment and endpoint security.
- Design, implement and maintain Windows Autopilot solutions to standardise and automate Windows device provisioning and lifecycle management.
- Administer Microsoft Entra ID, including Conditional Access, MFA, identity lifecycle, Enterprise Applications and SSO integrations.
- Administer and support Microsoft 365 services including Exchange Online, Teams, SharePoint Online and OneDrive.
- Support Active Directory and hybrid identity services, including Microsoft Entra Connect.
- Use PowerShell and Microsoft Graph API for Microsoft 365 administration, automation, reporting, technical investigation and integration with third-party platforms.
- Deliver SSO and automated user-provisioning integrations for third-party business applications, including SCIM-based provisioning.
- Implement and maintain endpoint, identity, email and Microsoft 365 security controls using Microsoft Defender and associated Microsoft security capabilities.
- Troubleshoot and resolve complex technical issues across Microsoft 365, Intune, endpoint, identity and application services using structured root-cause analysis.
- Collaborate with internal stakeholders, specialist partners, MSPs and software vendors to deliver technical projects, integrations and platform improvements.
- Deliver ITSM and service-management improvements, including helpdesk processes, service requests and operational automation.
- Create and maintain technical documentation, operational procedures and knowledge-base content supporting implemented services and ongoing operations.
- Provide senior 2nd/3rd-line escalation while balancing production support with technical project delivery and platform improvement.

SELECTED ACHIEVEMENTS

- Implemented and developed Microsoft Intune and Windows Autopilot capabilities, modernising endpoint provisioning and centralising device management.
- Delivered Microsoft 365, identity and endpoint-security improvements including Conditional Access, MFA and security-policy changes.
- Implemented SSO and application-provisioning integrations using Microsoft Entra ID, including SCIM-based integrations with third-party platforms.
- Used Microsoft Graph API and PowerShell for Microsoft 365 administration, automation, reporting and complex technical investigations.
- Delivered endpoint and mobile-device-management improvements across corporate Windows and mobile devices.
- Improved IT service processes through standardisation, documentation and automation.

Project Engineer / Support Engineer

Reform IT, Cheltenham | May 2019 - April 2020

Delivered technical projects and support services across multiple SME customer environments within an MSP.

- Implemented infrastructure, endpoint and Microsoft 365 solutions across customer environments.
- Supported Microsoft 365 migration and cloud-modernisation work.
- Provided technical escalation across Microsoft, endpoint, infrastructure and connectivity issues.
- Worked directly with customers throughout technical implementations, migrations and support engagements.
- Managed technical work across multiple independent customer environments and requirements.

Events Engineer - Contract

Freelance | March 2019 - May 2019

Provided technical engineering support for VR installations within a live exhibition environment, including equipment deployment, connectivity troubleshooting and investigation of wireless interference affecting service stability.

IT Support Engineer - 1st / 2nd Line

Charlton Networks, Cheltenham | January 2011 - January 2019

Eight years delivering managed IT services across a portfolio of SME customers within an MSP environment.

- Supported Microsoft desktop, server and Microsoft 365 environments.
- Installed and supported endpoint, networking and infrastructure solutions.
- Provided on-site and remote troubleshooting across multiple customer environments.
- Worked directly with customers from incident diagnosis through resolution and implementation.

TECHNICAL STACK

Endpoint: Microsoft Intune, Windows 10/11, Windows Autopilot, application deployment, compliance and configuration management, endpoint security, Apple Business Manager.

Identity: Microsoft Entra ID, Active Directory, Entra Connect, Conditional Access, MFA, SSO, Enterprise Applications, SCIM provisioning.

Microsoft Cloud: Microsoft 365, Exchange Online, Teams, SharePoint Online, OneDrive, Microsoft Azure.

Automation & APIs: PowerShell, Microsoft Graph API.

Security: Microsoft Defender, endpoint protection, Microsoft 365 security, identity security and email security.

Infrastructure: Active Directory, DNS, DHCP, Hyper-V, VMware.

Networking: VPNs, firewalls, routing, switching and network troubleshooting.
